

TESTIMONY

I'm Valentin Montibon, 65 years old and a resident of San Vicente, Biñan Laguna.

I used to be fat and I easily get exhausted from my everyday work. Often times my knees are in pain specially when walking for a long period of time. Maybe it's because of my body weight or rheumatism.

I tried taking PiCur and for the first 2 weeks I felt sleepy all the time. I also had a cough for 2 weeks. To my surprise, after 3 weeks I noticed that I'm losing weight and my cough is gone already. My waistline measures 35 inches before but now it's only 30 inches.

Thanks to PiCur, my body felt better now and all of my sickness are gone.

Now, I'm telling all my friends and relatives to take PiCur as well because this will protect our body from free radicals. Even if you are not sick take PiCur. As the saying goes; Prevention is better than cure.
