

TESTIMONY

My name is Yolly Alfane, enclosed is my personal testimony on the incredible power of PiCur. In the year 2009, our family had experienced a tragic incident when we lost our beloved son, Nick, who was then 14 years old due to a detected Pineal Germinoma on the 3rd ventricle of the brain called Choriocarcinoma, a cancerous tumor.

My family almost spent the whole year trying to save his life but he was destined to leave us eighteen days before his birthday in December of the same year. I suffered sleepless nights, agony and pain, too much stress and the like.

On the last week of January 2010, Manny Oli, who became my upline, invited me to attend a B.O.S.S. and PiCur was introduced to me and since I believed that it is a very good product having an anti-stress formula, I never doubted the very **HIGH ORAC VALUE OF PICUR HAVING 1,592,770**, which is the highest among natural food supplements.

Immediately I became a member that day and started taking a capsule every day. I was so focused on myself personally suffering from so much stress and because of the incident; I forgot to share PiCur with the members of my family.

On March 19, 2010 - Thursday, we rushed Merlin, our youngest daughter who is only 11 years old to the hospital due to a very high fever which, according to laboratory tests, her WBC was so high and according to her doctor she has an infection. For almost two days in the hospital, her fever never went down on the thermometer scale and even went up to 40 degrees Celsius despite giving her Paracetamol, both tablet and intravenous as well as the increased dosage of antibiotics.

Her pediatrician was so alarmed so she requested for repeat CBC and appeared from the result that her platelet count went down by 40 and she told me that she might be suffering from Dengue Fever so she requested for repeat blood test on early Saturday.

That Friday night, I prayed a lot asking God not again this time. Nick has just passed away and I cannot afford to lose one again. After praying hard begging God to please heal her, somebody whispered to me why not try to let her drink a capsule of PiCur. So I immediately followed the inner voice and just minutes before the nurse came to our room to monitor her temperature, her fever was gone and the thermometer reads: 37.4.

She slept soundly after taking a capsule of PiCur that night and her temperature went back to normal up to the time we reached home.

On Saturday, as early as 5:30am, blood was extracted and the doctor was so glad that her platelet count went back to normal, and she even asked me, "Mrs. ano pinainom mo dito?" (What medicine did you give her?)

I never told her I let my daughter took a capsule of PiCur for fear that she might get angry.

All I know is that I believed in the product because I have proven it to myself that I did not get sick for almost a year suffering from too much stress so that a single capsule alone will cure my daughter which really did.

We were discharged the following day as if nothing happened. We saved a lot of money from hospital bills. From then on, I never let the day pass without taking a capsule of PiCur and started sharing the product to my family, friends and loved ones.

Praise God! And thanks a lot to TGLI. More Power!!!
